

FRANCO LIMÓN

Software Developer

PROFESSIONAL PROFILE

With more than four years of experience in software development, I excel in creating high-quality applications and robust API development, with skills in deploying across multiple environments using SourceTree. I am proficient in HTML/CSS/JavaScript, ReactJS, .NET, C#, and Ruby on Rails, with advanced skills in both backend and frontend development, handling Bootstrap, Tailwind, and Sass. My ability to communicate and adapt has been crucial when working with clients such as Banorte, Metales Levinson, and Wingoo. Furthermore, my fluent English allows me to collaborate with international teams, enhancing efficiency in multicultural

WORK EXPERIENCE

2022 - Present

Global Hitss

At Global Hitss, I played a crucial role in leading and managing the progress and execution of assigned projects, including the development of their technical documentation. I have experience in creating diagrams, technical analysis, and developing detailed designs, which ensured effective implementation across various environments. I also provided advanced technical support, efficiently resolving issues.

2019 - 2020

Wingoo

I supervised the implementation of cloud services with Amazon S3 and coordinated deployments on Heroku. I led the development of the front-end through the implementation of Tailwind, and I expanded my knowledge in advanced tools such as Unix systems and TypeScript, focusing on adopting best practices in JavaScript. Additionally, I took on the responsibility of enhancing security through key encryption using Bcrypt.

2018 - 2019

Superprof

I was responsible for providing guidance to international students on technologies including Ruby on Rails, JavaScript, and C#, among others. I supervised and collaborated on projects for clients such as Metales Levinson and Easy Cancha, where I developed a management application for sports club members in Chile. Additionally, I led an independent project for an automotive company, using technologies like Ruby on Rails, JavaScript, Bootstrap, and PostgreSQL, and employing the MVC methodology. I also took charge of implementing an API for managing messages via WhatsApp.

TOOLS

- C#, JavaScript, Ruby
- SQL, Oracle
- Ruby On Rails, MVC
- Heroku, Amazon S3
- NVM, NPM, Chocolately
- SOAP, Postman
